History of Brooklyn Bridge

The Brooklyn Bridge is a bridge that spans the East River, connecting Lower Manhattan and Brooklyn Heights in New York. This work is considered a masterpiece of engineering in the 19th century, when for the first time steel was used for wire rope and granite stairs, creating a safe and beautiful passage. The Brooklyn Bridge supports six lanes of traffic (no trucks) and a shared pedestrian and bicycle path.

Since its opening in 1883, the bridge has become the pride of New York and the United States, an architectural excellence that is still admired by the world after nearly 140 years. Accordingly, the Brooklyn Bridge is recognized as a National Historic Landmark.

Completed in 1883, the bridge connecting the two boroughs of New York City, Manhattan and Brooklyn, is cut by the East River. With a main span of 486 meters (1,594.5 ft), it was the longest suspension bridge in the world as of 1903 and the first suspension bridge made of steel.

Since its opening, it has become an iconic part of New York. The bridge was only designated a National Historic Landmark in 1964.

It was originally called the New York Bridge – Brooklyn Bridge and East River Bridge. But then called the Brooklyn Bridge. Over the years, Brooklyn requests have gone through many reconfigurations. The Brooklyn Show is a symbol of the New York skyline. Interestingly, it is still switching between about 150,000 vehicles and pedestrians every day.
